Plug Type A

Used in: North and Central America, Japan (see complete list of countries on the right)

The Type A electrical plug (or flat blade attachment plug) is an ungrounded plug with two flat parallel pins. Although the American and Japanese plugs appear identical, the neutral pin on the American plug is wider than the live pin, whereas on the Japanese plug both pins are the same size. As a result, Japanese plugs can be used in the US but often not the other way around.

The pins on Type A and Type B plugs have a hole near the tip that fits into 'bumps' found on the contact wipers of some sockets, so that the pins are gripped more tightly allowing for better contact and also to prevent the plug from slipping out of the socket. Some sockets have spring-action blades that grip the sides of the pins, making the holes obsolete.

Locations using Plug Type A

	American Samoa	120V	60Hz	A, B, F, I
	Anguilla	110V	60Hz	A
	Antigua and Barbuda	230V	60Hz	A, B
	Aruba	127V	60Hz	A, B, F
	Bahamas	120V	60Hz	A, B
	Barbados	115V	50Hz	A, B
	Belize	110V 220V	60Hz	A, B, G
	Bermuda	120V	60Hz	A, B
	Bolivia	115V 230V	50Hz	A, C
	British Virgin Islands	110V	60Hz	A, B
	Cambodia	230V	50Hz	A, C, G
	Canada	120V	60Hz	A, B
	Cayman Islands	120V	60Hz	A, B
	China	220V	50Hz	A, C, I
	Colombia	110V	60Hz	A, B
	Costa Rica	120V	60Hz	A, B
	Cuba	110V	60Hz	A, B
	Dominican Republic	110V	60Hz	A, B
	Ecuador	120V	60Hz	A, B
	El Salvador	115V	60Hz	A, B
	Guam	110V	60Hz	A, B
	Guatemala	120V	60Hz	A, B
	Guyana	240V	60Hz	A, B, D, G
	Haiti	110V	60Hz	A, B
	Honduras	110V	60Hz	A, B
	Jamaica	110V	50Hz	A, B
	Japan	100V	50Hz, 60Hz	A, B

Plug Type B

Used in: North and Central America, Japan (see complete list of countries on the right)

The Type B electrical plug has two flat parallel pins and a round grounding (or earth) pin. The earth pin is longer than the other two so that the device is grounded before the power is connected. As with the type A plugs, the American and Japanese versions vary slightly.

Type B plugs are rated at 15 amps.

Locations using Plug Type B

	American Samoa	120V	60Hz	A, B, F, I
	Antigua and Barbuda	230V	60Hz	A, B
	Aruba	127V	60Hz	A, B, F

Plug Type C

Used in: Europe, with the exception of the UK, Ireland, Cyprus and Malta (see complete list of countries on the right)

The Type C electrical plug (or Europlug) is a two-wire plug that has two round pins. It fits into any socket that accepts 4.0 – 4.8 mm round contacts on 19 mm centres. They are being replaced by E, F, J, K or N sockets which work perfectly with Type C plugs.

Type C plugs are generally limited for use in appliances that require 2.5 amps or less.

Plug Type D

Used in: India, Sri Lanka, Nepal, Namibia (see complete list of countries on the right)

The Type D electrical plug has three large round pins in a triangular pattern. Type M plugs are often used alongside Type D plugs for larger appliances and as a result, some sockets work with both Type D and Type M plugs.

Type D plugs are rated 5 amps.

Locations using Plug Type D

Plug Type E

Used in: France, Belgium, Slovakia and Tunisia among others (see complete list of countries on the right)

The Type E electrical plug has two 4.8 mm round pins spaced 19 mm apart and a hole for the socket's male earthing pin. The Type E plug has a rounded shape and the Type E socket has a round recess. Type E plugs are rated 16 amps.

Note: The CEE 7/7 plug was developed to work with Type E and Type F sockets with a female contact (to accept the earthing pin of the Type E socket) and has earthing clips on both sides (to work with Type F sockets).

Locations using Plug Type E

Plug Type F

Used in: Germany, Austria, the Netherlands and Spain among others (see complete list of countries on the right)

The Type F electrical plug (also known as a Schuko plug) has two 4.8 mm round pins spaced 19 mm apart. It is similar to the Type E plug but has two earth clips on the side rather than a female earth contact. The CEE 7/7 plug was developed to work with sockets E and F and has grounding clips on both sides (to work with Type F sockets) and a female contact (to accept the grounding pin of the type E socket).

Type F plugs are rated 16 amps.

Locations using Plug Type F

Plug Type G

Used in: UK, Ireland, Cyprus, Malta, Malaysia, Singapore, Hong Kong (see complete list of countries on the right)

The Type G electrical plug has three rectangular blades in a triangular pattern and has an incorporated fuse (usually a 3 amps fuse for smaller appliances such as a computer and a 13 amps one for heavy duty appliances such as heaters). British sockets have shutters on the live and neutral contacts so that foreign objects can't be introduced into them.

Plug Type H

Used in: [Israel](#)

The Type H plug is unique to Israel and has two flat pins in a V-shape as well as a grounding pin. It is however currently being phased out in favour of a round-pinned version. The holes in Type H sockets are wide in the middle so as to accommodate the round-pinned version of the Type H plug as well as Type C plugs.

Type H plugs are rated 16 amps.

Locations using Plug Type H

Plug Type I

Used in: Australia, New Zealand, Papua New Guinea, Argentina (see complete list of countries on the right)

The Type I plug has two flat pins in a V-shape as well as a grounding pin. A version of the plug, which only has the two flat pins, exists as well. The Australian plug also works with sockets in China.

Australia's standard plug/socket system is rated 10 amps but a plug/socket configuration rated 15 amps also exists, although the ground pin is wider. A standard 10 amp plug will fit into a 15 amp socket but not the other way around.

Types: [A](#) [B](#) [C](#) [D](#) [E](#) [F](#) [G](#) [H](#) [I](#) [J](#) [K](#) [L](#) [M](#) [N](#)

Plug Type J

Used in: Switzerland and Lichtenstein (see complete list of countries on the right)

The Type J plug has two round pins as well as a grounding pin. Although the Type J plug looks a lot like the Brazilian Type N plug it is incompatible with the Type N socket as the earth pin is further away from the centre line than on Type N. However, Type C plugs are perfectly compatible with Type J sockets.

Type J plugs are rated 10 amps.

Locations using Plug Type J				
	Jordan	230V	50Hz	B, C, D, F, G, J
	Liechtenstein	230V	50Hz	C, J

Plug Type K

Used in: Denmark and Greenland (see complete list of countries on the right)

The Type K plug has two round pins as well as a grounding pin. It is similar to Type F, the difference being that Type F has grounding clips instead of a grounding pin. Type C plugs are perfectly compatible with Type F sockets. Type E plugs and sockets are also used in Denmark.

Locations using Plug Type K					
	Bangladesh	220V	50Hz	C, D, G, K	
	Denmark	230V	50Hz	C, F, E, K	
	Faroe Islands	230V	50Hz	C, F, E, K

Plug Type L

Used in: Italy (see complete list of countries on the right)

There are two variations of the Type L plug, one rated at 10 amps, and one at 16 amps. The 10 amp version has two round pins that are 4 mm thick and spaced 5.5 mm apart, with a grounding pin in the middle. The 16 amp version has two round pins that are 5 mm thick, spaced 8mm apart, as well as a grounding pin. Italy has a kind of “universal” socket that comprises a “schuko” socket for C, E, F and L plugs and a “bipasso” socket for L and C plugs.

Locations using Plug Type L

	Chile	220V	50Hz	C, L
	Eritrea	230V	50Hz	C, L
	Ethiopia	220V	50Hz	C, E, F, L

Types: [A](#) [B](#) [C](#) [D](#) [E](#) [F](#) [G](#) [H](#) [I](#) [J](#) [K](#) [L](#) [M](#) [N](#)

Plug Type M

Used in: South Africa, Swaziland, Lesotho (see complete list of countries on the right)

The Type M plug has three round pins in a triangular pattern and looks similar to the Indian Type D plug, but its pins are much larger. Type M plugs are sometimes used for bigger appliances in countries that make use of Type D plugs, as well as in Israel (Type H). Therefore, sockets in these countries sometimes work with Type M plugs.

Locations using Plug Type M

	Bhutan	230V	50Hz	C, D, F, G, M
	Botswana	230V	50Hz	D, G, M
	India	230V	50Hz	C, D, M
	Israel	230V	50Hz	C, H, M
	Kuwait	240V	50Hz	C, G, M
	Lesotho	220V	50Hz	M
	Macau	220V	50Hz	D, M, G, F

World Plugs [Plugs & Sockets](#)

[Map](#) [List](#) [IEC Standards](#) [Why so many?](#) [Brief history](#)

Types: [A](#) [B](#) [C](#) [D](#) [E](#) [F](#) [G](#) [H](#) [I](#) [J](#) [K](#) [L](#) [M](#) [N](#)

Plug Type N

Used in: [Brazil](#) (see complete list of countries on the right)

There are two variations of the Type N plug, one rated at 10 amps, and one at 20 amps. The 10 amp version has two round pins that are 4 mm thick, and a grounding pin. The 20 amp version, used for heavier appliances, has two round pins 4.8 mm in diameter, and a grounding pin. The Type N socket was designed to work with Type C plugs as well.

Brazil is one of the few countries that uses two types of voltage. While most states use 127 V, some of them use 220 V. It is therefore important to find out the local voltage before plugging in your appliance (note: wrong voltage can destroy your appliance). Many appliances sold in Brazil are dual voltage.

Locations using Plug Type N

	Brazil	127V 220V	60Hz	C, N
	South Africa	230V	50Hz	C, D, M, N
